Bug5:

Description:

The verification link is one time link, which means if user deletes the mail of verification at inbox. And try to click again for registration the application is saying already sent it is not sending fresh generated verification link.

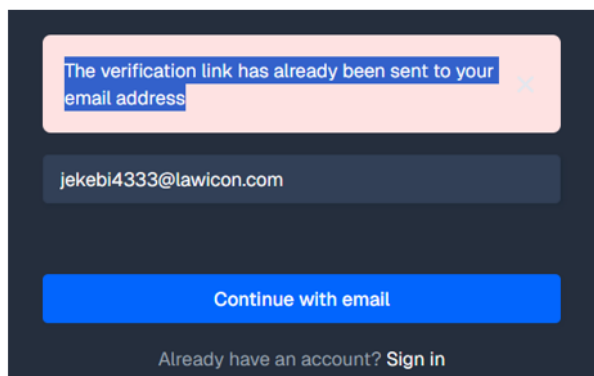

Step to Reproduce:

1. Open the browser.
2. Navigate on create an account page
3. Enter mail and click continue with email.
4. Then this message is displayed “The verification link has already been sent to your email address”.
5. Then go to inbox of Gmail and delete the mail.
6. return to the application and again click on continue, with same email address
7. You will get same message of sent but You will not get any verification link mail.

severity: Critical

Priority: High
